

THE MAGNIFICENT 8 FEATURES OF THE imagePROGRAF TC-20

Canon

YOUR PERFECT PRINTER WILL:

1. HIGH QUALITY, AFFORDABLE PRICE

All the power of high-quality pigment ink prints, without the price tag. The imagePROGRAF TC-20 sharply reproduces everything from technical drawings to marketing materials, for professional results you can rely on.

Bring your vision to life with vivid colour expression – the device uses pigment ink for all colours. Working out and about? Quality ink means sharp lines, and your prints stay readable even when using highlighters or dealing with bad weather.

2. COMPACT DESIGN

Can you imagine a professional large format printer tucked onto a shelf or desktop.

You can now. The imagePROGRAF TC-20 is compact, bringing key functionality from larger devices into smaller spaces - in the office or at home.

3. EASY OPERATION

Take the hassle out of large format printing with a user-friendly device. Full access from the front means no awkward and time-consuming maintenance, easy ink refills and a discreet profile, wherever you're working.

And keep your prints moving: a shaftless roll holder makes setting up roll paper straightforward in the smallest spaces, while the built-in auto-sheet feeder minimises intervention when switching between roll paper and cut sheet.

4. BIGGER INK BOTTLES WITH LOW TCO

High capacity 70ml ink bottles with low total cost of ownership (TCO). The imagePROGRAF TC-20 uses a specialised tubing system to supply ink to the print head, allowing for bigger ink bottles.

That means less frequent refills, lower operating costs, and more time spent printing.

5. VERSATILE

The imagePROGRAF TC-20 and its compatible software tools – such as the free PosterArtist web application – make it simple for non-specialist workers to create professional and eye-catching posters and designs with little training.

Meanwhile, continuous printing with both roll paper and cut sheets helps you produce different sized prints smoothly, including CAD drawings, menus, sales posters and more.

6. HYBRID READY

Home, office, building site, retail shop – all in a day's work with the imagePROGRAF TC-20.

Crucially, the device has the same job submission tool as your office-based imagePROGRAF devices, including Direct Print Plus and Free Layout Plus, for seamless hybrid working.

7. GREEN AT HEART

However far along your sustainability journey you are, the imagePROGRAF TC-20 can help you meet your goals.

Easily recyclable plastic ink bottles and streamlined packaging help you reduce waste and target lifetime carbon emissions.

8. LOW ENERGY USE

Want to get ahead of rising energy costs? Need to keep overheads down?

The imagePROGRAF TC-20 uses less power during operation than competitor models. In fact, it's the first Canon large format printer to earn an EPEAT Gold* rating – the highest level of sustainability accreditation available for electronic devices.
